

Wrong Number Family File Server

Update: 07/04/2020

The Wrong Number File Server is a File Server which at the moment houses 12 or 13 CD's of older Public Domain software, along with my entire Commodore Library from when my original BBS went down in 1993 which includes a lot of hard to find software.

If you are interested in carrying the File Server, your BBS must have RLOGIN compatibility. I currently have it running on Mystic, Enigma, and a behind the scenes SynchroNet BBS. If you would like to carry it please email me at wrgnbr2@gmail.com, with your BBS Name, and a password you want to use.
